EXHIBIT G

NANTRAG’S MAY 10, 2019 VERSION
OF PROPOSED RULE
SECTION 1. GENERAL PROVISIONS.

(A) This regulation shall be known and shall be cited as "The Arkansas Nutrient Water Quality Trading Regulation".

(B) Definitions:

(1) "Department" or "ADEQ" means the Arkansas Department of Environmental Quality or its successor, unless otherwise specified.

(2) "Director" means the Director of the Arkansas Department of Environmental Quality or the Director’s designee, unless otherwise specified.

(C) This regulation is adopted under the authority of Act 335 of 2015, codified at Ark. Code Ann. §§ 8-4-232 and 8-4-233.

(D) Participation in any Nutrient Credit Generating Project under this Regulation shall be purely voluntary.

(E) Pursuant to Ark. Code Ann. § 8-4-232(E):

(1) the Department has the responsibility to develop a schedule of user fees by calculating the reasonable costs to the Department of evaluating, implementing and enforcing the nutrient water quality trading, credit, and offset program; and

(2) the Commission may establish a schedule of user fees to be collected by the Department from persons or entities applying for approval of, generating, or utilizing
credits and offsets from the Nutrient Credit Generating Projects in order to comply
with the National Pollutant Discharge Elimination System permit limits.

(F) Nothing in this regulation shall be construed to limit or impinge any requirement of any other
State or Federal environmental law or regulation.

SECTION 2. AUTHORITY TO APPROVE NUTRIENT CREDIT GENERATING
PROJECTS FOR USE AS OFFSETS.

The Director of the Arkansas Department of Environmental Quality shall have authority to
approve Nutrient Credit Generating Projects as sources of nutrient credits that may be used by
National Pollutant Discharge Elimination System, permit holders to offset their nutrient
discharges when determining compliance with water quality-based permit limits.

SECTION 3. APPLICATIONS FOR APPROVAL OF NUTRIENT CREDIT
GENERATING PROJECTS.

(A) Any person seeking approval of Nutrient Credit Generating Project shall submit an
application for approval to the Director. The application shall include:

(1) A description of the location, including the watershed, where the credit-generating
project will be implemented;

(2) A description of the watershed, including but not limited to a geographic boundary, in
which the credits are proposed for use as offsets;

(3) A list of the NPDES permitted point sources that may use the credits as offsets;

(4) The time period in which the credit-generating project may be used as an offset;

(5) Evidence that the credit-generating project will result in a reduction of nutrient
discharges below the existing baseline requirements;
(6) Evidence and calculations used to derive the credit quantity and credit ratios resulting from the crediting-generating project, including an explanation of the methods used to address uncertainty factors;

(7) A description of the methods by which the implementation, performance, and operation and maintenance of the credit-generating project will be verified and documented, and the identity of the person or entity responsible for documenting the verification; and

(8) A certification, signed by the applicant, attesting that the application is true and accurate to the best of the applicant’s knowledge and belief.

(B) If an application involves nonpoint source nutrient credit-generating projects or activities, the proposed Nutrient Credit Generating Project shall be submitted to the Arkansas Natural Resources Commission for review prior to submitting the application to the Director of the Arkansas Department of Environmental Quality. In such cases, the application to the Director shall include a written statement from the Arkansas Natural Resources Commission confirming their review of the project and reporting any comments or recommendations resulting from that review.

(C) Applications submitted to the Director of the Arkansas Department of Environmental Quality shall comply with the public notice procedures and requirements for an individual permit under Regulation No. 8. Applications shall also be publicly noticed through electronic notice and publication on the Arkansas Department of Environmental Quality website.

(D) After review of the application the Director may approve the Nutrient Credit Generating Project as a source of nutrient credits that may be used as offsets as requested, disapprove
the Nutrient Credit Generating Project as a source of nutrient credits, or approve the Nutrient Credit Generating Project as a source of nutrient credits subject to specific conditions or limitations.

(E) Unless expressly granted for a shorter or longer term, the approval of the Nutrient Credit Generating Project as a source of nutrient credits shall be limited to a term of five years from the date of the Director's decision, but may be renewed or extended upon application in accordance with procedures in this section.

(F) In deciding whether to approve an application for approval of a Nutrient Credit Generating Project, the Director shall consider, among all other relevant factors:

(1) The evidence provided in the application to support the factors identified in Section 3(A);

(2) The calculation used to derive the credit quantity and credit ratios resulting from the credit-generating project, including an explanation of methods used to address uncertainty factors;

(3) The methods for verifying the reliability of the implementation, performance, and operation and maintenance of the credit-generating project; and

(4) The experience and capacity of the persons who will be responsible for implementing and verifying the credit-generating project.

(G) The Director's decision approving a Nutrient Credit Generating Project shall include written findings regarding the factors identified in Section 3(A) and specify the conditions and limitations that will apply to any use of the nutrient credits generated. At a minimum, the conditions applicable to an Nutrient Credit Generating Project shall specify:
(1) The watershed in which the credits generated by the Nutrient Credit Generating Project may be used as an offset;

(2) The time period in which the credits generated by the Nutrient Credit Generating Project may be used as an offset;

(3) The method by which implementation, performance, and operation and maintenance of the credit-generating project will be verified, and the identity of the person or entity responsible for documenting the verification; and

(4) For projects generating credits by non-point source activity, a minimum credit ratio of 1.5:1 (projected nutrient reductions or savings to nutrient credits for the project) shall be applied when calculating the credit quantity.

(H) Prior to taking final action on a request for approval of a Nutrient Credit Generating Project, the Director shall cause public notice to be published within the watershed where the credit will be generated and utilized in a newspaper of general circulation and on the Arkansas Department of Environmental Quality’s website. The public shall be allowed a period of not less than thirty (30) calendar days in which to submit written comments. The decision to grant or deny approval of a Nutrient Credit Generating Project shall include a written response to all issues raised in comments submitted during the public comment period. A copy of the final decision granting or denying certification of a Nutrient Credit Generating Project shall be sent to the applicant and each person who submitted written comments within the public comment period. The Director’s decision to grant or deny approval of a Nutrient Credit Generating Project shall be subject to the same review and appeal provisions as a final permitting decision under Regulation No. 8.
(I) No Nutrient Credit Generating Project shall be approved by the Director unless the project, activity, or discharge reduction involved in the project will reduce the nutrient load below the applicable baseline requirements.

(1) For projects generating credits by point source pollution reduction, the baseline requirements shall be the National Pollutant Discharge Elimination System water-quality based permit limits for the point source in question or the wasteload allocation in any applicable Total Maximum Daily Load, whichever is more stringent.

(2) For projects generating credits by non-point source activity, the baseline requirements shall be the regulatory requirements applicable to the location where the project will generate the credits.

(3) If the baseline requirements applicable to a Nutrient Credit Generating Project change after the date the Project is approved, the amount of offset allowed from credits generated by the Nutrient Credit Generating Project shall be reduced to conform to the baseline requirements applicable at the time the nutrient credit is used. The procedure for adjusting the amount or duration of credits allowed from an approved Nutrient Credit Generating Project shall be the same as that used for reopening and modifying National Pollutant Discharge Elimination System permits.

(J) The fact that a non-point source project or a point source pollution reduction may be supported in part or entirely by government grants or other third-party financial funding shall not prevent the project, activity, or pollution reduction from being eligible for approval as a Nutrient Credit Generating Project, where such use is allowed by the granting agency or third-party entity.
(K) All inspections necessary to determine compliance with non-point source Nutrient Credit Generating Projects that cannot otherwise be verified through the procedures outlined in the approved Nutrient Credit Generating Project application will be performed by the Arkansas Natural Resources Commission. Nothing in this section shall interfere with the Department’s authority to conduct compliance and complaint inspections as authorized by statute or regulation.

SECTION 4. RESPONSIBILITY FOR PERMIT COMPLIANCE.

(A) Credits generated by an approved Nutrient Credit Generating Project may be used as offsets only when expressly authorized by the National Pollutant Discharge Elimination System permit in question, or a modification of the permit. In addition to all other permit application or permit modification requirements, the application must include:

1. Evidence that the nutrient credits used under the permit modification are approved for use in the watershed into which the National Pollutant Discharge Elimination System permittee discharges;

2. Evidence that use of the nutrient credits as an offset will not result in an unacceptable localized adverse effect on water quality;

3. Evidence that use of the nutrient credits as an offset will not result in a net increase in pollutant loading in the relevant watershed; and

4. Evidence that use of the nutrient credits as an offset will not have a significant adverse impact upon a reservoir that is a drinking water supply source for an existing public water supply system as designated by the Arkansas Department of Health.
(B) A National Pollutant Discharge Elimination System permittee that discharges into a watershed identified on Appendix A as an existing drinking water reservoir watershed designated in the Arkansas Department of Health GIS Database shall not be allowed to use credits that have been generated outside of the watershed of the reservoir as offsets against its permit limits for nutrients.

(C) A permittee relying on nutrient credits to demonstrate compliance with its National Pollutant Discharge Elimination System permit limits retains full responsibility for achieving and maintaining permit compliance. If a Nutrient Credit Generating Project fails to meet the terms and conditions of its approval as a source of nutrient credits, National Pollutant Discharge Elimination System permit holders may not rely on credits generated by the project regardless of the fact that failure of the project may have been attributable to circumstances beyond the reasonable control of the permit holder.

SECTION 5: NO USE OF CREDITS OUTSIDE WATERSHED

Nutrient credits generated by an approved Nutrient Credit Generating Project may be utilized as offsets only in the watershed in which the credits are generated.

SECTION 6: EFFECTIVE DATE.

This regulation is effective ten (10) days after filing with the Secretary of State, the State Library and the Bureau of Legislative Research.
